The prototype machine is located at Gelec's headquarters in London and can provide engineers and designers with robust, functional models with fine detail and improved surface finish.

The machine uses a new type of material called ABSplus, which is known to be 40% tougher and stronger than materials previously available.

The maximum build size for models is 768, equal to 203 x 203 x 305 mm, with layer thicknesses of either 0.178 mm or 0.254 mm.

Models can now be produced in 9 different colours including: natural, white, black, dark grey, red, olive green, blue, fluorescent yellow and nectarine.

Please contact our sales team for further information.
